

What is claimed is:

1. A vacuum switch comprising a vacuum valve including a stationary-side terminal conductor and a moving-side terminal conductor;

5        wherein a radiator provided with a cover making open a side face of a plurality of fin-shaped protrusions extending outwardly from said terminal conductor and surrounding an outer periphery of the protrusions, is fixed to said terminal conductor.

10

2. The vacuum switch according to claim 1, wherein the plurality of fins provided with a cover making a side face open and surrounding an outer periphery is integrally molded on said terminal conductor.
